A Dream Come True

By 40-something

This book really delivers what it promises - it is the music of math - not just the scales. My eleven year old son and I have been working through the book and having a great time. He has a teacher this year who really doesn't know how to teach gifted kids math and this book has been a lifesaver. Some of the concepts are

fairly simple but as you work through how to apply them with increasing difficulty to some real-world problems then it does get you thinking. I highly recommend this book for all students - it is really the way math should be taught.

challenge math critique

By L. Leonard

I teach a class of identified Highly Capable 5th graders, some of whom function at least 2 years above in math ability. The strands in this book have been very useful in differentiating my math curriculum. The kids enjoy the work and tackle the "Einstein" level with great zeal. It has proven to be well worth purchasing.
