Positive Reviews are RIGHT ON TARGET!

By K. Patterson

I am an older RN student changing careers into nursing. Before class and clinicals I didn't have much exposure to hospitals so it takes me a little longer to learn and get acquainted with the material and where to look for it. In clinicals this book is helpful in giving me an overview that includes a description of the disease/diagnosis, the pathophysiology, causes, Risk factors (which you can use to help you pick a risk for NANDA), Incidence which tells you what part of the body can have affects or perhaps if it is more in men or women, a common characteristics section (i.e. tenderness, pain, erythema, warmth, edema...) complications (i.e. sepsis, DVT, progressions of cellulitis...), what to assess for (i.e. fever, chills, warmth and tenderness of the skin...) physical findings, test results i.e. what lab results to look for (helpful when doing your care plans later and you are relating your labs to your patient), and treatments with a medication section that lists the classes of drugs most commonly used, and surgery. There is also a Nursing Considerations section with a goal or "key outcomes" section (pt goals), a nursing interventions section (general more like nonpharmacologic like raising HOB 30 degrees), a "monitoring" section with items to monitor like pain,

vitals, and edema. And lastly, a pt teaching section that has discharge planning listed (these 4 sections are really helpful to follow when choosing your interventions for your care plan as they really keep you on track). As one of the reviews stated this is all on a 2 page format that looks very similar to their davis drug book layout, but with all of it laid out in bulleted lists. Other students were ordering their own after they saw mine. The soft cover is laminated too which makes it easy to wipe off. I will absolutely be using this not just for school but after as well when I start working. This really helped me to improve my care while in clinicals and increase comprehension when doing my care plans. Because this has 460 diseases/conditions listed it would have been great if they had a "Possible NANDA section" like the Tabers dictionary has for each disease they list in the back but alas something to improve on, and maybe will be in later editions.

The best book to buy for nursing students! a lifesaver :)

By SUSAN M JOHNSON

I wish I had found this book earlier in my nursing studies. Of all the of books I have bought while in nursing school, this is my absolute favorite! It's loaded full of information, but in an incredibly easy format to use. Each disease is on only 2 pages, so no page turning. It's right there in front of you, categorized perfect with all the pertinent information needed in nursing and in school right down to goals and interventions. My only regret is how much money I spent before finding this book on other books to help me get thru nursing school. It will go with me everywhere for the remainder of school and my career! I also like that it's not a hardcover, but not a soft cover either. It's a sturdier soft cover type material which makes it easy to carry and doesn't add much to the weight of my backpack when going to and from places. If you're in nursing school, you know what I mean.

I give this book 5 stars!

EXCELLENT Resource!

By PaganDeva2000

I used this book while in nursing school, and continue to use this as a resource. Currently, I work in a hospital clinic. It covers illnesses in all domains- med-surg, pediatrics, OB/GYN and psych. When I float to clinics I am not that familiar with, I bring this book, along with the Quick Check Diagnostic Tests book. Am able to fully explain to the patient what is going on. Can refamiliarize myself with conditions I studied in school. Is a win-win!
