WAR MADE NEW: WEAPONS, WARRIORS, AND THE MAKING OF THE MODERN WORLD BY MAX BOOT PDF

A monumental, groundbreaking work, now in paperback, that shows how technological and strategic revolutions have transformed the battlefield

Combining gripping narrative history with wide-ranging analysis, War Made New focuses on four 'revolutions' in military affairs and describes how inventions ranging from gunpowder to GPS-guided air strikes have remade the field of battle and shaped the rise and fall of empires.

War Made New begins with the Gunpowder Revolution and explains warfare's evolution from ritualistic, drawn-out engagements to much deadlier events, precipitating the rise of the modern nation-state. He next explores the triumph of steel and steam during the Industrial Revolution, showing how it powered the spread of European colonial empires. Moving into the twentieth century and the Second Industrial Revolution, Boot examines three critical clashes of World War II to illustrate how new technology such as the tank, radio, and airplane ushered in terrifying new forms of warfare and the rise of centralized, and even totalitarian, world powers. Finally, Boot focuses on the Gulf War, the invasion of Afghanistan, and the Iraq War—arguing that even as cutting-edge technologies have made America the greatest military power in world history, advanced communications systems have allowed decentralized, 'irregular' forces to become an increasingly significant threat.

A Popular and "Brief" History of Technology in War

By Dianne Roberts

There are many factors which combine to determine the outcomes of battles, some within man's control and others such as blind luck and the ineluctable fog of war residing firmly in the realm of fate. But to many, and for a large number of Americans particularly, the impact of technology has a special resonance in their imaginations. Max Boot's *War Made New* is a good, popular history of the impact of several technological revolutions in weaponry on the battlefield. Although over 500 pages long, it is not an exhaustive or comprehensive history. Instead it is an anthology of several battles for each of his identified revolutions, all occurring within the "modern" era of warfare defined from around the Renaissance forward.

Perhaps the two best features of this book are the caution with which Mr. Boot approaches the subject and the accessibility he gives it to readers not steeped in military history. War is a very complex and adaptive thing, a chameleon in Karl von Clausewitz's description. No two are alike, and the comparative impact of technology in each is unique, variable, and dependent on other factors which change with each new conflict in unpredictable ways. Mr. Boot thus prefaces his book with two fitting quotes to showcase the range of professional opinion on this fungible factor, one from the eccentric British Armor pioneer J.F.C. Fuller to the extent that technology is the exclusive determinant of battlefield success, the contrasting from Napoleon stating that its impact is essentially non-existent.

The second very attractive feature of this book is that Mr. Boot is actually quite a good writer who truly makes history an interesting and quick read. His individual histories go into significant background matter to set up the battle, he delves into the bios of the major commanders on both sides, the political issues at stake, and the geography and terrain of the sites of the clashes. His accounts of the engagements themselves are raw, often exciting, and he performs a thorough after analysis action for each of his selected battles drawing out harsh lessons from the bloodshed and detritus.

Many have criticized what may at first glance seem like his eclectic selection of conflicts. This is perhaps understandable given the lack of representation of some major and politically important conflicts, Korea and Vietnam in particular being mentioned. However the author's purpose is to explore the slim slice of battles in which generally technology played a dominant role, and more particularly in which one side was pioneering or had mastered one of his identified revolutions in military technology while the other side was about to pay the price for its failure to adapt. Vietnam, although politically more important to America than many of the battles he showcases, was one in which the enemy fought successfully in a manner that nullified the impact of technology on the overall outcome of the war.

Mr. Boot summarizes his book with a preview of possible military revolutions to come and a recap of the lessons which have appeared repeatedly in his individual battle histories. Namely the constant changing of the technology of war, but a pace of change that is anything but, coming in fits and starts here and in giant and rapid bursts of innovation there. The unpredictability of when military revolutions will occur. The importance of mastering not just the technology behind them but the necessity of developing supporting tactics, training, doctrine, personnel policies, etc. to make the whole apparatus of war work in concert to deliver battlefield results. And perhaps most importantly the way military revolutions have restructured the geopolitical order in the past, leaving nations which did not adapt, often regardless of their previous size and power, on the decline, and smaller powers which did adapt the new masters of their domain.

All in all a recommended, but popular and not academic, book on technology in war which draws what appear to be very reasonable and illuminating conclusions.

The Evolution of War

By D. T. Jones

The main reason why this book is important is simply that there is a basis for all of injustice in warfare in the world today and before. It is important to realize that everything changes, and because not so much of a pivotal invention or technique, but a single thought pattern and innovation to utilize these techniques and inventions would be the game changer in almost every major or minor conflict since the 14th and 15th century. In many conflicts the smaller, and very often physically weaker adversary overcame the opposition in a largely compelling way, on thier way to victory. Every example in this book illustrated that bigger is not better, in fact the larger one became, the more entrenched they had become in maintaining thier status quo, and subsequently more and more unwieldly as time progresses. In the end, those that are able to change and innovate will continue to dominate, regardless of size, and in many ways some cultures have become victims of thier own suceses and excesses. It is important to recognize this idea and fact. Whomever was the adversary last week is not going to be the adversary next week. And the folks next week, in the information age will have learned from the people last week.

Warfare like all other manifestations of mankind's idiosyncrasies will continue to evolve and grow. And until we evolve away from fighting one another, then we must evolve the fight.

Only the dead know the end of war

By Eugene A Jewett

In the sense that history is really military history punctuated by brief periods of peace, this book is worth the read. Max Boot engages and brings along the reader while making military history come alive. Anyone can understand his narrative while grasping the basic lessons of war. Max Boot divides the last 500 years into the Gunpowder Revolution, the 1st Industrial Revolution, the 2nd Ind. Rev. and the Information revolution. He cites pivotal battles and renown captains to make his case - Gustavus Aldolphus, Lord Kitchener, Yamamoto, LeMay, Napoleon, Guderian, Schwarzkopf, etc. It's about a series of military measures and counter measures where one technological innovation follows another with the importance of leadership and training as an overshadow.

Not enough is taught on this subject which is shameful considering its importance in the ordering of power about the globe. As always the tide will swing when the shock of recognition suffiently jars those at the levers of power out of their complacency. Until then, buckle up!
